

HTML5 Client: How to maximize the browser window

Overview

The RDP protocol does not allow resizing while connected without a reconnection.

Please note that you will get the best experience possible from ServerLink HTML5 client by connecting with *maximized browser*.

However, if you want to force the browser window to be as big as possible, you can try to “force” the HTML5 window to open with the maximum size (but not as a “maximized” window, due to internet browsers security limitations).

Maximizing the browser window

You will have to modify the file "Clients\www\software\common.js" located in your ServerLink directory. We advise you to use a text editor such as Notepad++ (do *not* use Word).

In order to have a browser window which use all the screen, you will have to modify the line(s) with "window.open" in it, and add the following text:

```
"screenX=0,screenY=0,left=0,top=0,fullscreen=yes,width="+ (screen.availWidth-5)+"",height="+ (screen.availHeight- (55)) )
```

This allows IE/Chrome/Firefox/Safari to open the window with a screen size (minus Windows bar). Unfortunately it is not possible to force a web browser to "maximize" the window in a "fullscreen" Windows meaning.

Open the file and search "window.open"

Then add the new at the end before the brackets, for example:

```
window.open('software/' + jwtsclickLinkBefore(getside(), 'javaconnect.html'), window.opforfalse);
```

will become:

```
window.open('software/' + jwtsclickLinkBefore(getside(), 'javaconnect.html'), window.opforfalse, "screenX=0,screenY=0,left=0,top=0,fullscreen=yes,width="+ (screen.availWidth-5)+"",height="+ (screen.availHeight- (55)) );
```

And again:

```
window.open('software/' + jwtsclickLinkBefore(getside(), 'remoteapp.html'), window.opforfalse, 'resizable=yes,location=no,width=250,height=100');
```

will become:

```
window.open('software/' + jwtsclickLinkBefore(getside(), 'remoteapp.html'), window.opforfalse, 'resizable=yes,location=no,' + screenX=0,screenY=0,left=0,top=0,fullscreen=yes,width="+ (screen.availWidth-5)+"",height="+ (screen.availHeight- (55)) );
```

And finally :

```
window.open('software/html5.html', forHTML5());
```

will become:

```
window.open('software/html5.html', forHTML5(),  
"screenX=0,screenY=0,left=0,top=0,fullscreen=yes,width="+ (screen.availWidth-  
5)+" ,height="+ (screen.availHeight- (55)));
```
